Subject: Palo Alto Exports

I'm working with some researchers at Palo Alto – they would like copies of our configs and logs from any VM-100s we're using in our networks. I completely trust these people and we're safe doing this. They've sent me some information on exporting configs/logs from the GUI you can follow (see below). When you've exported the configs/log files you can sftp them to 192.168.61.253. You should have the login information. Please do this before 7:25 PM today.

Thanks,

Ash

COMPETITION NOTE: If you're using one or both VM-100 appliances, follow the instructions below. You'll need to sftp the files over to the "upload" directory in your account on 192.168.61.253. Your login credentials are on your team password sheet under "Palo Alto Upload Account". If you are NOT using any VM-100s upload a response to this inject telling us what firewall you are using (if any).

You should also see some attachments to this inject. The "nccdc_firewall_export.txt" is a python script you can run that should do the exports for you. It requires python3 and pan-python installed to run. And you'd want to rename it as a .py file. The README provides more details you can review. And if you have any questions, just stop by the PaloAlto chat channel.

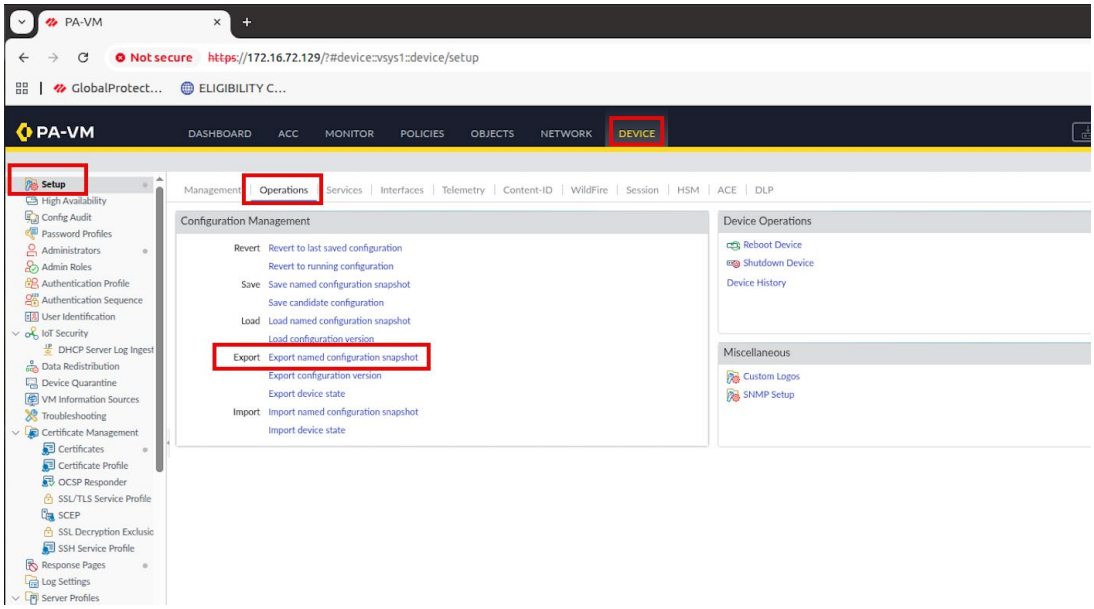
VM-100 Firewall Export Instructions

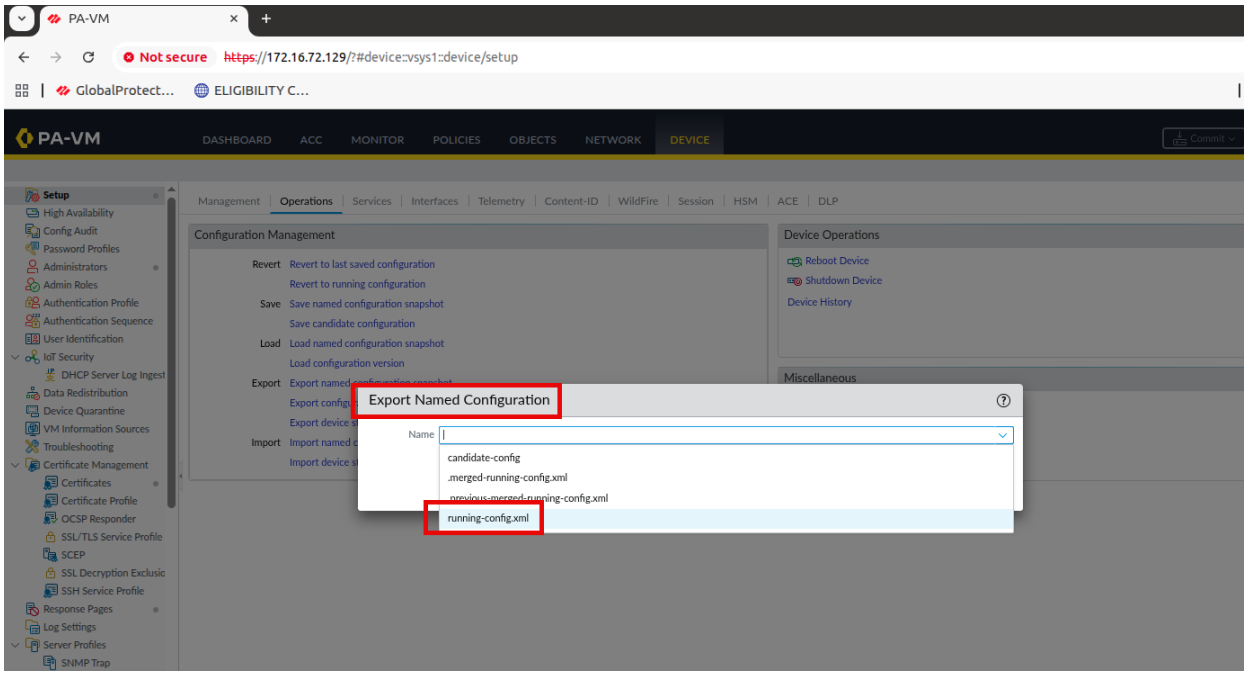
Please follow the instructions below to export your VM-100 firewall configuration file and log files and upload them to your sftp competition folder.

1. Exporting Configuration Files

- **Navigate to the Configuration Export:** In the WebUI, go to **Device > Setup > Operations**.
- **Export Configuration:** Within the **Configuration Management** section, click the **Export named configuration snapshot** button.

- **Save:** Select the desired running-config.xml as
  - **team(your team number)-running-config1.xml** for day 1
  - **team(your team number)-running-config2.xml** for day 2





2. Exporting Log Files:

Please export the following **Log** Files to your local host**:**

- **Traffic, Threat,**

- **URL Filtering,**
- **WildFire Submissions,**
- **Data Filtering,**
- **Decryption,**
- **Configuration and System.**

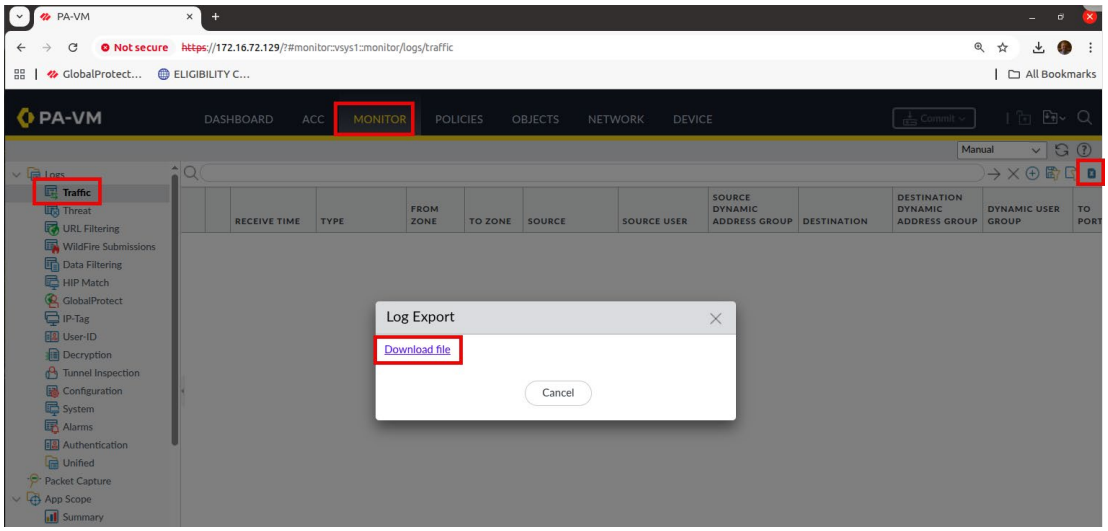
Use the following format to locally save your log exports:

team(number)-(name of log, e.g. traffic)(day of competition, e.g. 1 or 2).csv.

Please review the steps below if you need further guidance.

a. Traffic Log

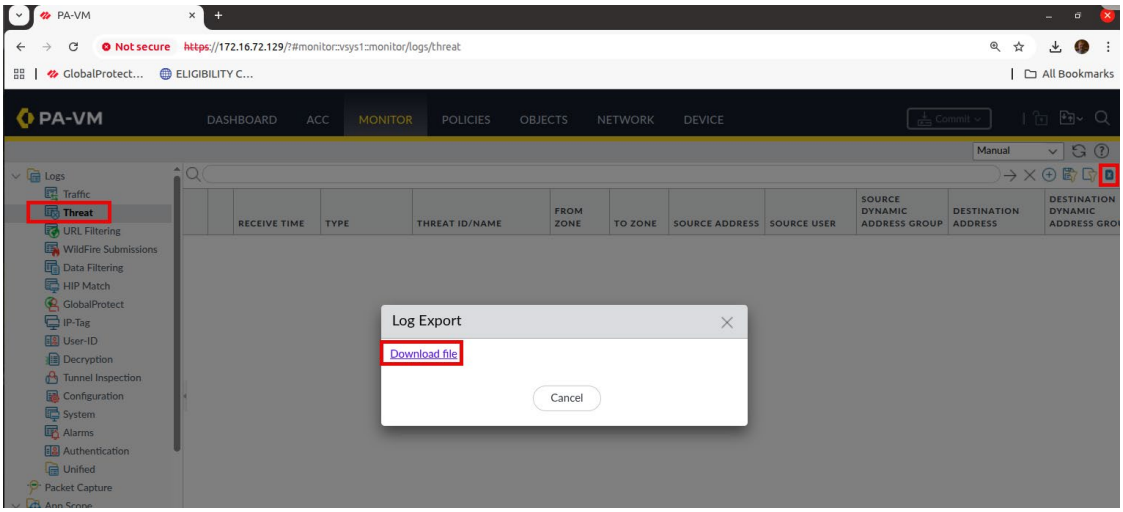
- **Navigate to Log Settings:** To access your logs, browse to **Monitor > Logs**.
- **Select Log Type:** Select the **Traffic** log
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the Traffic log
    - **team(number)-traffic1.csv for day1**
    - **team(number)-traffic2.csv for day2**



b. Threat Log

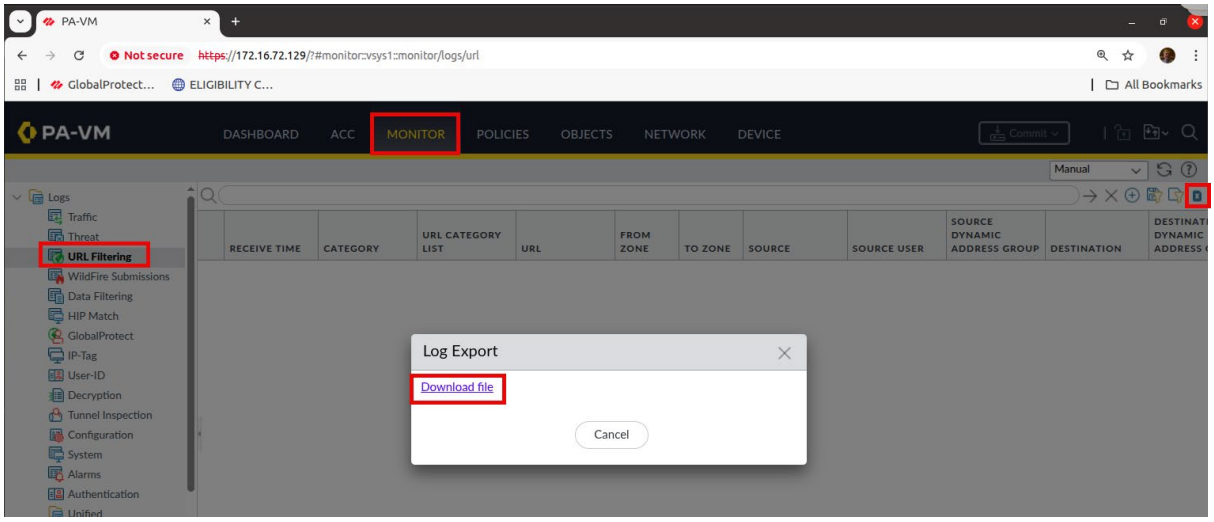
- In the **Monitor tab** Select **Threat Log**
- **Click the spreadsheet icon on the far-right side of toolbar**

- In the **Log Export** dialog box click **Download** and save the Threat log
    - **team(number)-threat1.csv for day1**
    - **team(number)-threat2.csv for day2**



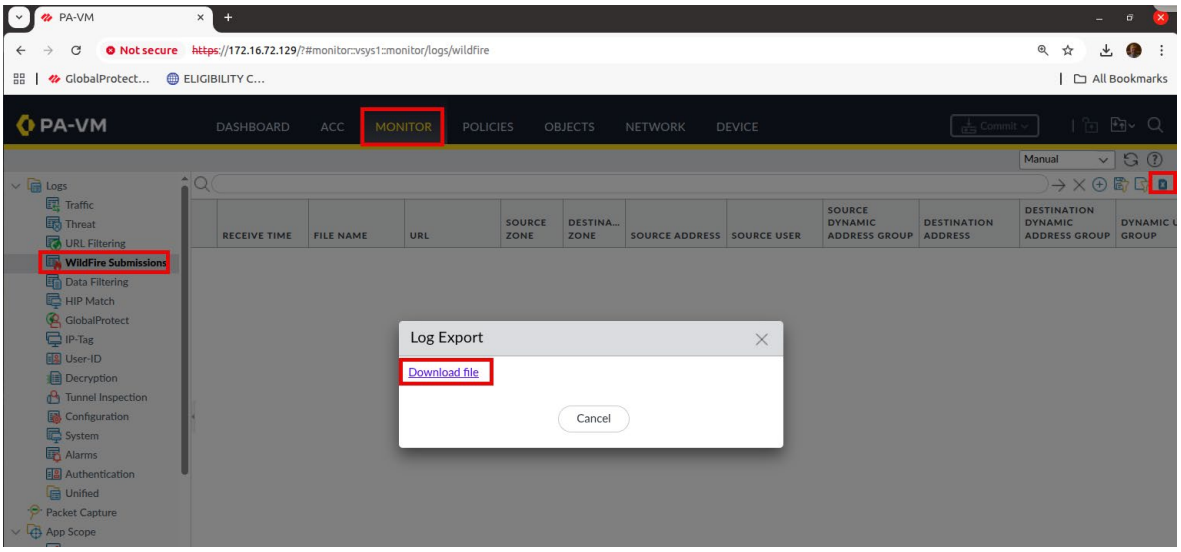
c. URL Filtering Log

- In the **Monitor tab** Select **URL Filtering Log**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the traffic log
    - **team(number)-url1.csv for day1**
    - **team(number)-url2.csv for day2**



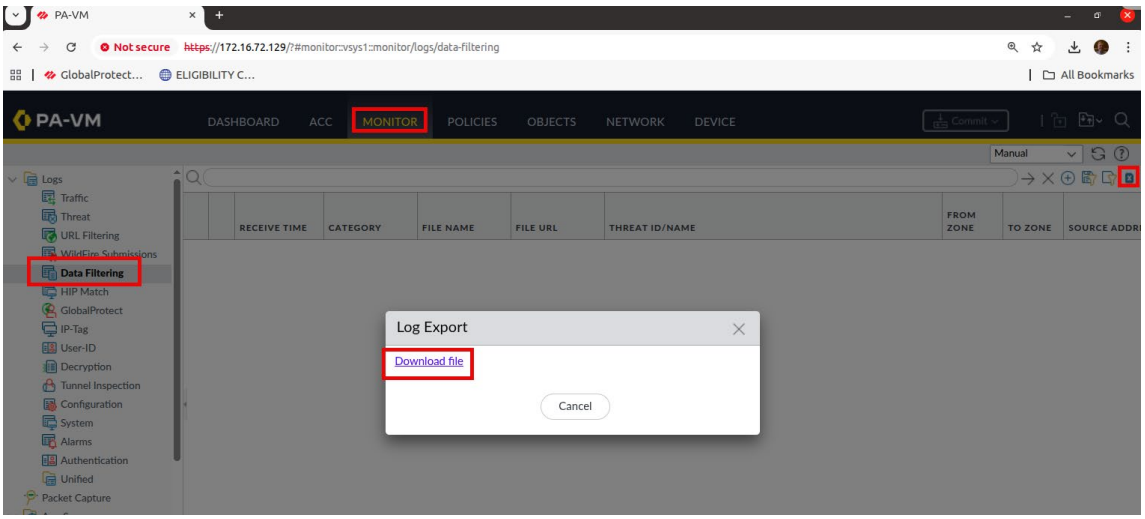
d. WildFire Submissions

- In the **Monitor tab** Select **WildFire Submissions**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the WildFire Submissions log
    - **team(number)-wildfire1.csv for day1**
    - **team(number)-wildfire2.csv for day2**



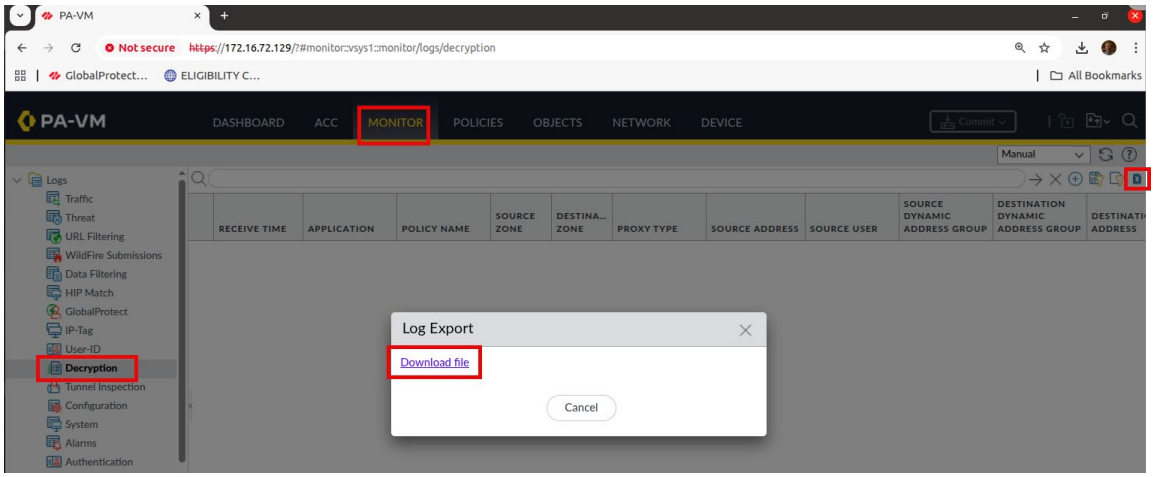
e. Data Filtering

- In the **Monitor tab** Select **Data Filtering**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the Data Filtering log
    - **team(number)-data1.csv for day1**
    - **team(number)-data2.csv for day2**



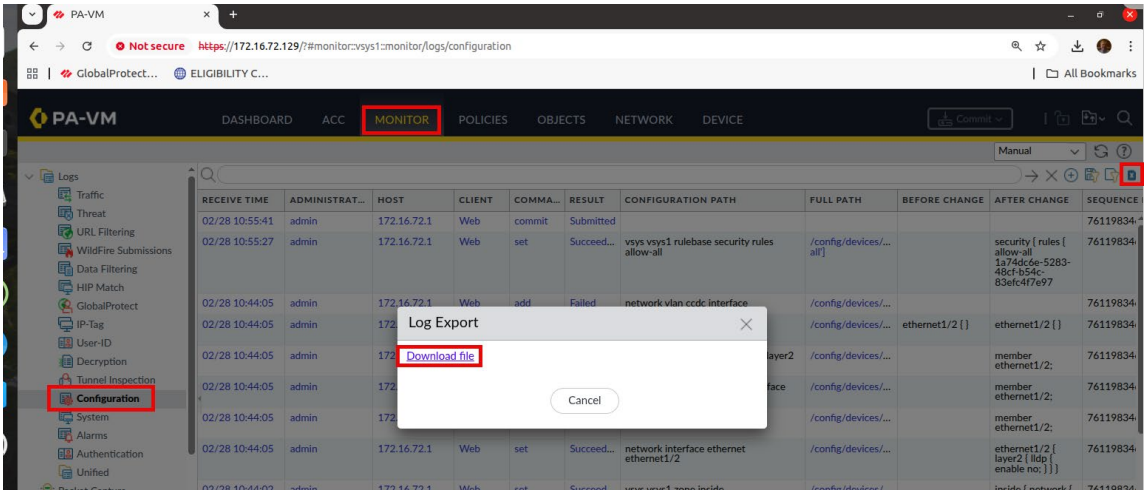
f. Decryption

- In the **Monitor tab** Select **Decryption**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the Decryption log
    - **team(number)-decrypt1.csv for day1**
    - **team(number)-decrypt2.csv for day2**



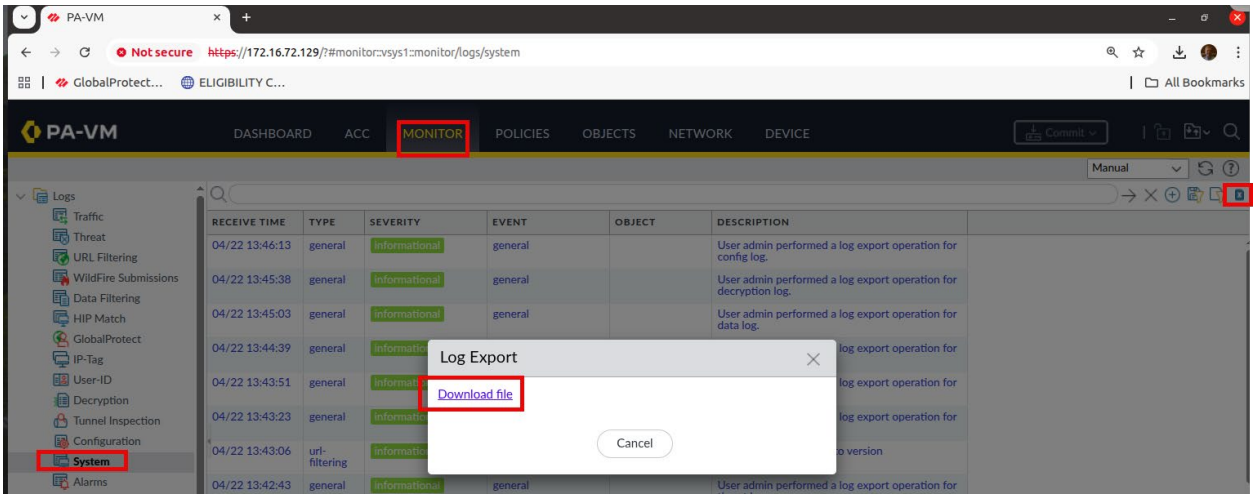
g. Configuration

- In the **Monitor tab** Select **Configuration**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the Configuration log
    - **team(number)-config1.csv for day1**
    - **team(number)-config2.csv for day2**



h. System

- In the **Monitor tab** Select **System**
- **Click the spreadsheet icon on the far-right side of toolbar**
- In the **Log Export** dialog box click **Download** and save the System log
    - **team(number)-system1.csv for day1**
    - **team(number)-system2.csv for day2**



3. Please Upload the configuration files and log files into your teams SFTP competition folder.
